How small businesses can safeguard their data

Small businesses have to deal with the same cyberattacks and the same industry and government data regulations as large companies - but, without the big IT department to implement protections. That's where Microsoft 365 Business comes in. It protects against external threats and data leaks with one solution that helps you securely run and grow your small business.

Data encryption. Microsoft 365 Business only allows authorized users to open/view documents – so even if they leave your business, you are still protected.

Ransomware and phishing. Bob clicks
